A MUCH-NEEDED SIMPLIFIED INTRODUCTION TO CIVIL WAR DRILL

MANUAL OF ARMS
Each of these commands is normally executed in a series of discrete motions rather as one continuous action. “Shoulder Arms” is the basic position from which all commands are given. After performing each of the commands, the officer will return the company to “shoulder arms” prior to executing the next command. Each command is given in two parts, the first part is preparatory to give you a second to figure out what to do, the action is taken on the second part.

Shoulder – Arms

The musket is in the right hand—with the barrel nearly vertical and resting in the hollow of the shoulder, the guard to the front, the arm hanging nearly at its full length near the body. The thumb and forefinger surround the trigger guard, the remaining fingers are grasping the swell of the stock just under the cock, which rests on the little finger.

Order – Arms

Seize the musket briskly with the left hand near the upper band and detach it slightly from the shoulder with the right hand. Loosen the grasp of the right hand and lower the musket with the left hand, then grab it again with the right hand above the lower band, the butt about four inches from the ground, the right hand supported against the hip, then drop the left hand by the side. Let the musket slip through the right hand to the ground.

Support – Arms

Lift the musket away from the body and seize the musket with the left hand at the lower band, raise this hand as high as the chin, and seize the musket at the same time with the right hand four inches below the cock. Rotate the barrel to the front; and then place the musket on the left shoulder, supporting it with the cock against the left forearm, the left hand resting on the right breast.

Right Shoulder Shift – Arms

Bring the musket away from the body, rotating the barrel 90 degrees to the left, while at the same time raising the musket. Grab the musket with the right hand between the barrel and the sight, and slide the left hand down the stock, with the first two fingers on either side of the beak and the other fingers under the butt plate. Rest the musket on the right shoulder, lock plate upwards. Many reenactment groups prefer the barrel to be more vertical, although modern research indicates that the proper position was angled behind the head as shown above.

Present – Arms

Start just like “Load”, and place the musket between the feet, barrel to the

Inspection – Arms
A MUCH-NEEDED SIMPLIFIED INTRODUCTION TO CIVIL WAR DRILL

front. Holding the musket with the right hand, reverse the left hand, withdraw the bayonet, and fix it to the barrel. Grasp the musket with the left hand below and near the upper band, seize the rammer and withdraw it in two steps as in loading. Glide the ramrod to the bottom of the bore, and resume the position of “Order Arms.” The officer will then inspect each musket. As the officer reaches you, raise your musket as if you are going to “Shoulder Arms”, regrasp it with your left hand between the lower band and guide sight, the lock to the front, the left hand at the height of the chin, and hand it to the officer. After he has inspected it, he will return it and you will grasp it with the right hand and return to the position of “Order Arms.” After the officer is finished inspecting the man to your immediate left, bring the musket back between the feet, return the rammer to the pipes and resume the position of “Order Arms”.

If, instead of inspection of arms, the instructor should merely wish bayonets to he fixed, he will command:

**Fix - Bayonets**
Take the position as described above, fix the bayonet using the left hand, and resume the position of “Order Arms.” “Unfix – Bayonets” is used to remove the bayonet and return to “Order Arms.”

**Spring - Rammers**
This command is used to determine if the barrel of the musket is clear. Put the rammer in the barrel as has been explained above, and immediately retake the position of ordered arms. The officer will take the rammer by the small end, and spring it in the barrel, or cause each recruit to make it ring in the barrel. “Return – Rammers” will be given to return the rammer and return to “Ordered Arms.”

**Secure Arms**
Begin just like “Support Arms,” but instead of raising the musket to the shoulder, simply lower it with the left hand. All muskets to be inclined at the same angle.

**Ground - Arms**
Turn the musket with the right hand, the barrel to the left, while grabbing the cartridge box with the left hand, bend the body, advance the left foot, the heel opposite the lower band; and lay the musket on the ground with the right hand, the butt of the musket not moving from its original position. Rise up, bring the left foot by the side of the right, let go of the cartridge box with the left hand, and drop the hands by the side. “Raise Arms” reverses the process to pick up the musket.

**Trail – Arms**
The same as the first motion of “Order Arms,” but keep the butt of the musket about four inches from the ground. Incline the musket forward at an angle so that the rear rank men will not touch the front rank men with their bayonets. All muskets to be inclined at the same angle.

Many late-war photos show the position modified with the musket across the body, lock plate in.

http://maysvilleky.net/~joeandsimone/
In Place – Rest

At the word “rest” move the right foot six inches to the rear of the left heel, the left knee slightly bent, the musket moved between the feet, lockplate in, with the right hand grasping the muzzle above the upper band, and the left hand placed across the right wrist. The above directions are not historically accurate but are widely used in reenactments as a compromise between the more formal “Parade Rest” and the informal do-whatever-you-want-but-keep-one-foot-in-place “In Place Rest” of the drill manuals.

Stack - Arms
This gets complicated as there are several different versions and each unit has a favorite.

Break Ranks – March
This is the command that usually follows “Stack Arms.”

Take – Arms
This is the command used after the men are lined up again in from of the stack.

“LOAD IN NINE TIMES”
The following nine steps are the individual movements used in training a soldier to fire his musket.

1. Load
Grasp the musket with the left hand, shift the right hand to the upper band, place the butt of the musket between the feet with the barrel to the front; then seize it with the left hand near the muzzle, which should be three inches from the body. Move the right to the cartridge box and open the flap.

2. Handle Cartridge
Seize a cartridge with the thumb and next two fingers, and place it between the teeth.

3. Tear – Cartridge
Tear the paper to the powder, hold the cartridge upright between the thumb and first two fingers and place it in front of and near the muzzle, the back of the hand to the front.

4. Charge – Cartridge
Empty the powder into the barrel. Seize the head of the rammer with the thumb and fore-finger of the right hand. {The musket ball would be removed from the paper at this point and set in the barrel. For firing demonstrations –NOT battle reenactments - a portion of the blank cartridge paper is often wadded up and used to demonstrate a bullet.}

5. Draw – Rammer
Half draw the rammer by extending, the right arm; steady the rammer in this position with the left thumb; regrasp the rammer near the muzzle with the right hand, thumb down and extended along the rammer. Clear the rammer from the pipes by again extending the arm; and turn the rammer, the little end of the rammer passing near the left shoulder; place the head of the rammer on the ball, the back of the hand to the front.

6. Ram – Cartridge

7. Return – Rammer
Draw the rammer half-way out, steady...

http://maysvilleky.net/~joeandsimone/
of the stock (fingers away from the trigger).

Aim (Front Rank)

Raise the musket with both hands, the butt against the right shoulder; the left elbow down, the right as high as the shoulder; incline the head to sight the musket, the right thumb extended along the stock, the fore-finger on the trigger. The front rank men will raise their right elbow a little less in order to facilitate the aim of the rear rank men.

Aim (Rear Rank)

The rear rank men will each move their right foot about ten inches to the right, inclining the upper part of the body forward.

Fire

Squeeze the trigger. If this is the first time that the weapon has been fired in combat, remain in the “Fire” position until the officer gives the “Load” command. The command “Fire at Will” means that you go straight to the “load” sequence without waiting for any command. If part of a demonstration or firing a salute, do not move from the “fire” position until “Recover – Arms”, is given. This command takes you back to the “Ready” position. “Recover” was a training-only command and was not used in combat.

Firing at Reenactments

1. The main difference is that the ramrod is not used, and is sometimes required to be left in camp for safety reasons. Once the powder is placed in the barrel, the musket butt is tamped gently a few times to seat the powder in the bottom of the barrel.

2. The command “load” means do all of the loading steps – the individual steps will not be called out.

3. Once you’ve fired, reload. You may generally continue to fire until commanded otherwise.

4. Firing “by the Oblique”

From a battle line it may be necessary to fire at an angle to the left or right without repositioning the whole line. The officer will call “Ready, by the Right Oblique, Aim, Fire”. On the word Aim, the front rank rotates their upper torso to the right without moving the feet, and the rear rank moves their left foot forward to aim around the front rank man. On a “Left Oblique”, the rear rank man advances his right foot.

5. Firing “by File”

The command sequence is “Fire by File, Company, Ready, Commence Firing”. The rightmost two-rank file will fire first, with the rear rank man calling “Aim, Fire”, as he brings his musket forward, followed by the next file and so on down the line.

6. Firing “by Rank”

The command will be “Fire by Rank, Company, Ready (both ranks), Rear Rank, Aim, Fire, Load…(once several rear rank men have reloaded) Front Rank, Aim, Fire, Load.”

7. Jammed Muskets and Misfires

If your musket does not fire, tap the butt gently once or twice on the ground, reprime with a new cap, and try to fire again. Do NOT load more powder into the musket. If it still does not fire,
MARCHING

While marching the musket will generally be held at one of three positions – Shoulder Arms, Support Arms, or Right Shoulder Shift. For longer marches the unit will be placed “at the route step”, which means that you keep your places in line but you don’t keep cadence. This command is often accompanied by “Arms at Will.” This does not mean to hold the musket any which way – it must still be on the shoulder, held with one or both hands, the muzzle elevated. Once the command “Halt” is given the company returns to “shoulder arms” regardless of what position they were previously in. For marching “at the double quick” or any other such rapid movement, the muskets are automatically taken to “right shoulder shift.”

Position of the Soldier

When at “Attention”, the heels should be on the same line, with the feet turned out equally, and forming something less than a right angle. The arms should hang naturally with the palm of the hand turned a little to the front, the little finger behind the seem of the pants, and the eyes fixed straight to the front.

Eyes - Right, and Front

At the command “Right”, turn the head gently, so as to bring the inner corner of the left eye in line with the buttons of the coat, the eyes fixed on the line of the eyes of the men in, or supposed to be in, the same rank. At the command “Front” return the head to the previous position.

Attention - Company

At the second, word return to the prescribed position with steadiness.

In Each Rank Count – Twos

At this command, starting from right to left, the first file counts “one”, the second file counts “2”, the third file counts “one”, and so on down the line. If you tend to forget which number you are, use a finger or two on your left hand to help.
Right - Face
At the second command, the Number 1 men stay in place, turn on their left heel and then replace the right heel by the side of the left. The number two men turn and step up between the two Number 1 men. This changes the formation from a “battle line” formation of two ranks to a “column of fours” most often used for marching. Facing are most often done to the right, however, if they are done to the “Left”, the “twos” stay and place and the “ones” step up.

![Diagram of Right Face formation]

About - Face
At the word “about”, the recruit will turn on left heel, bring the left toe to the front rear, the hollow opposite to, and full heel, the feet square to each other. At the word “face”, the recruit will turn on both heels, bringing, at the same time, the right heel by the side of the left.

Forward – March
At the word “march”, step off with the left foot. When the officer shall wish to stop the march, he will command “Company – Halt”. At “Halt”. Which should be given at the instant when either foot is coming to the ground, the foot in the rear will be brought up, and planted by the side of the other.
By File Left – March

From a column of fours, the front begins a “wheel” as shown, the inner pivot man taking smaller steps than the outer men. The command is understood to mean a turn of 90 degrees in the direction commanded.

Countermarch, By File Left – March
Same as “By Files Left”, except understood to reverse direction 180 degrees.

Left Wheel - March

Command is given from a battle line of two ranks. Keep elbows touching, look to the outside of the wheeling pivot. Stop the wheel and continue forward at “Forward – March.”

Left Oblique – March
Take a half turn to the left, touching shoulders with the man adjacent. Stop the oblique and continue forward at “Forward – March.”

http://maysvilleky.net/~joeandsimone/
By Company Into Line – March

From a Column of Fours the battle line is formed. The sergeant continues to march straight and each file moves at the double quick (at right shoulder shift), coming onto the line one file after the other from right to left. They take the step from the sergeant and come to “Shoulder – Arms.”

Saluting
To salute the soldier raises his right hand to the right side of the visor of his cap, palm to the front and the elbow raised to the height of the shoulder. Sergeants with muskets will salute by bringing the left hand across the body, so as to strike the musket near the right shoulder. Corporals and privates out of ranks and with muskets at “Shoulder Arms” salute in the same manner.

When to Salute
1. When a soldier meets an officer he is to salute looking at the same time in a respectful and soldier-like manner at the officer, who will return the compliment thus offered. When approaching an officer the salute should be made six paces before meeting him and held until six paces after past him.
2. A NCO or soldier being seated, and without particular occupation, will rise on the approach of an officer, and make the customary salutation. If standing, he will turn toward the officer for the same purpose. If the parties remain in the same place or on the same ground, such compliments need not be repeated.

http://maysvilleky.net/~joeandsimone/
3. A NCO or soldier when he addresses an officer or is spoken to by one, salutes; on receiving the answer or communication from the officer, he again salutes before turning to go away.
4. When a soldier enters an officer’s quarters armed, he simply makes the required salute, and does not take off his cap; but without arms, he takes off his cap and stands in the position of the soldier (stands at attention). He remains standing until invited to sit down. When soldiers are in a room and an officer enters they should rise and remain standing until invited to sit down.
5. A sentry or guard when on a post will salute lieutenants and captains by facing to them and coming to "shoulder arms" and holding until the officer passes. A sentry or guard when on a post will salute officers above the rank of captain, officers of the day, and commanding officers (whether above the rank of captain or not) by turning to them and going to "Present Arms." Armed bodies of men passing near a sentinel’s post, commanded by an officer are entitled to a "present arms;" if by a NCO they are saluted by a "shoulder arms."

When Not To Salute
1. Sentinels and guards do not give a salute between retreat and reveille (sun-down to sun-up). Pickets do not salute officers.
2. When soldiers are marching or in ranks, they do not salute. If employed at any work, they are not expected to discontinue their employment to salute.
